The POLYFLEX® Korroflex primer is
a corrosion-resistant coating powder
for iron and steel substrates.

KARL BUBENHOFER AG

POLYFLEX® EP-20

Korroflex primer Matt 10

Benefit from low costs, short delivery times and top quality!

The POLYFLEX® Korroflex primer is a corrosion-resistant coating powder for iron and steel substrates based on an epoxy resin. The Korroflex primer provides lasting protection against corrosion as a single-layer system for functional interior applications or as a primer powder in two-layer systems for outdoor use.

Properties

- Excellent protection against corrosion
- High level of resistance against chemical effects
- Good outgassing properties

Use

Single layer: Functional interior use.

Two layers: As a primer for blasted and zinc phosphate-plated steel as well as for galvanized substrates in outdoor use.

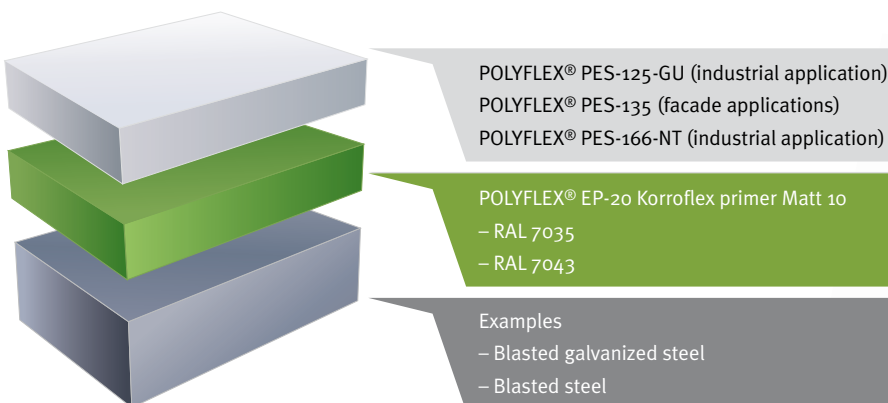

Applications

- Steel and metal construction
- Galvanized parts in general
- For outdoor applications requiring a high degree of protection against corrosion

Product

POLYFLEX® EP-20 Korroflex primer Matt 10 is available in the colour tones RAL 7035 (light grey) and RAL 7043 (traffic grey) from the warehouse with short delivery times.

Other colour tones, such as RAL, NCS or using any other colour tone sample can be manufactured on request.

In stock!
Article no. 12530 in the colors RAL 7035 and RAL 7043.
